

AGRICULTURE IN GHANA

FACTS AND FIGURES (2016)

Issued by:

MINISTRY OF FOOD AND AGRICULTURE

Statistics, Research and Information Directorate (SRID)

October, 2017

FOREWORD

This document, *Agriculture in Ghana: Facts and Figures (2016)*, has been prepared by the Statistics Research and Information Directorate (SRID) of the Ministry of Food and Agriculture (MoFA). It is the 25th edition of an annual series that commenced in 1991.

There is a growing recognition that for any impactful and sustained growth and development to be achieved, in any sphere of endeavor, there is the need to have access to timely and good quality data/statistics. For instance, governments' sound policy strategies, planning, implementation, monitoring and evaluation are predicated on the existence of good quality data. Various institutions, organizations, researchers, among others, also need timely, reliable and relevant data to guide their effective decision making process.

Agriculture has long been recognized, in particular, by developing economies as the critical sector that could help achieve the much needed global goal of poverty reduction, in a much more sustainable way. For this to happen, however, countries require reliable, relevant and accurate statistics to adequately inform policy direction and indeed the decision-making process.

In response to the need for good quality agricultural statistics to support the decision-making processes of both the public and private sector, the Ministry of Food and Agriculture, acting through the SRID, initiated the annual production of the Facts and Figures document. It seeks to serve as a quick reference book for various category of users by providing salient features of the Ghanaian agriculture in figures, with focus on crops (including cocoa), livestock and fisheries sub-sectors, of the economy, as well as food commodity and input prices.

Inputs into the document are derived from two sources; primary (e.g. through surveys conducted by SRID) and secondary (e.g. through provision of data by other public and private institutions). Access to the secondary source has often come with some difficulty due, in part, to some data providers' lack of appreciation of the use to which such data is put. This notwithstanding, the need for agricultural statistics has been growing, over time, with user needs becoming increasingly varied and complex. As part of efforts to improve primary data collection and analysis, the SRID has been collaborating with the International Food Policy Research Institute (IFPRI) to strengthen the agricultural statistics system through the implementation of the Ghana Agricultural Production Survey (GAPS). The GAPS seeks to enhance the quality and quantity of statistics generated by SRID.

The Ministry intends to continue with the publication of this document to provide quality, consistent, and timely information on the agricultural sector for the formulation of sound development policies and plans to improve the efficiency of food production and distribution, thereby raising productivity, incomes and ultimately enhancing the livelihood of the Ghanaian farmer. It is therefore, hoped that this document will be widely circulated and the information therein utilized, to help accelerate the growth and development of agriculture in Ghana.

The Ministry also wishes to state that all contributions, comments and suggestions that will help to further improve subsequent editions of the document are very much welcome. Any information in this regard should kindly be addressed to:

The Director

Hon. Minister of Food and Agriculture
(October, 2016)

ACKNOWLEDGEMENT

The 25th Edition of the Agriculture in Ghana Facts and Figures document was prepared by SRID, MoFA, with contributions from various sources. The Directorate, wishes to express its profound gratitude to all the Organizations, Institutions, Ministries, Departments and Agencies (MDAs) who made inputs, in one way or the other, for their invaluable contributions towards the successful production of the document.

We are particularly grateful to MoFA top Management, led by the sector Minister, his two Deputies, the Chief Director, and all the Directors, for their continuous support, guidance, insightful comments and suggestions over the years, which have helped in no small measure in improving the quality of the document.

The International Food Policy and Research Institute (IFPRI) and USAID, deserve special commendation for their continuous support in strengthening the agricultural statistical system, through the provision of technical and financial support under the Ghana Strategy Support Programme (GSSP), towards the implementation of the Ghana Agricultural Production Survey (GAPS)

To all MDAs, organizations, institutions, development partners, among others, who have supported the Directorate in various ways over the years either as providers or users of our data, we are pleased to say that your invaluable contributions, suggestions and comments, have largely contributed to enhancing the credibility of the document and we therefore, wish to say thank you so much for your immense contributions.

The entire management and staff of the SRID have worked so tirelessly in coordinating the preparation of this document. The considerable efforts and dedication demonstrated throughout the various stages of development, leading to the final production of the document deserve special recognition. Your overall contribution in this regard, is therefore, very much appreciated and commendable.

Any other sources of information, contributions, among others, which might have been inadvertently omitted in this acknowledgement, are deeply regretted and management of SRID wishes to apologize unreservedly for such an omission. Due acknowledgement would be made in subsequent publications, if it is brought to our attention.

AGRICULTURE IN GHANA FACTS AND FIGURES

SECTION 1: GEOGRAPHIC, DEMOGRAPHIC AND ECONOMIC BACKGROUND OF THE COUNTRY

The Country : Republic of Ghana.

Capital : Accra.

Total Administrative Regions: 10

Total Administrative Districts: 216 (Metropolitan=6, Municipal=49, District=161)

Population (2010) : 24,658,823 ¹

Population Estimate (2016) : 28,308,301 ²

Population Growth Rate : 2.3% per annum

Geographic Location : Latitude 4° 44'N and 11° 11'N;
: Longitude 3° 11' W and 1° 11'E

Coastline : 535 km long³

Total Land Area : 23,853,300 hectares

Principal Agricultural Exports : Cocoa, Timber, Horticultural Products,
Fish/Sea Foods

Principal Agricultural Imports: Wheat, Rice, Chicken (frozen), Milk, Fish

Principal Mineral Resources : Petroleum, Gold, Bauxite, Manganese and
Diamond.

Figure 1: Land Area by Region (%)

2.2: Vegetation

2.2.1: Land Cover

The most obvious land cover change in Ghana is the major increase in agricultural land in all regions of the country. However, the largest increases can be seen in the northeast, east-central, and southwestern regions of Ghana. This rate of agricultural expansion is unprecedented in the country's history, overrunning many of the other land cover types, including Ghana's savannas, woodlands, and forests. From 1975 to 2000, agricultural lands expanded from 13 to 28 percent of Ghana's total area and continued to extend rapidly, reaching 32 percent of Ghana's land area in 2013. This expansion has significance beyond the simple area numbers. Agricultural lands often represent a radical transformation from a diverse variety of vegetation types and natural habitats to crop-

dominated landscapes. In Ghana, savannas experienced a large loss, from about 51 to 40 percent of the total land area from 1975 to 2013. The formerly uninterrupted savanna landscapes of the Central Sudan Savanna, Main Transitional Zone, and Central Transitional Zone are now highly fragmented, with large tracts of natural habitat broken into myriad patches of farmland, reducing habitat suitability for many types of wildlife.

Another important land cover change in Ghana is the degradation of forest. The forest class (represented primarily by Ghana’s dense evergreen rain forest and moist deciduous forest) shows a small decline in area from about 16,400 sq km in 1975 to 15,500 sq km in 2000, a reduction of 5 percent. This decline accelerated rapidly between 2000 and 2013, as forests were reduced by an additional 20 percent, to 12,400 sq km in 2013. The degraded forest, which occurs mainly in the off-reserve areas, represents a vegetation type that was derived from the dense and deciduous forests, modified by human activity. The traditional slash-and-burn method of agriculture, logging, annual wildfires, and recently commissioned open cast mining are the major disturbing factors that have diminished vegetation extent and composition in the southern ecoregions. Degraded forests continued to decrease in area, losing 17 percent of their cover between 1975 and 2013. The expansion of cocoa farms, other crops, and fallow lands was the primary driver of the decline in degraded forest area. The gallery forest, which represents the most biologically rich habitat in the savanna zones of central and northern Ghana, also experienced a decline that has accelerated, mainly because of clear-cutting for agriculture, from 6,200 sq km in 1975 to 3,750 sq km in 2013. If we add all forest classes together, we see a significant decline of 25 percent of forests over the 38-year period. However, historical imagery confirms that a much larger loss of forest occurred during the 1960s. What remains today is primarily contained in the biological reserves. Ghana continues to lose its forest resources at an unsustainable rate. Ghana’s rapid population growth is reflected in the rapid expansion of the Settlements land cover class. From 1,460 sq km in 1975, urban areas expanded to 2,560 sq km in 2000 and 3,830 sq km in 2013, a 161 percent increase over 38 years. The greater Accra metropolitan area has about 4 million people, Kumasi just over 2 million, and Tamale about 370,000 (GSS, 2013).

Table 2.4: Land Cover (Km²)

Land cover classes	1975		2000		2013	
	Area (km ²)	Percent of total area	Area (km ²)	Percent of total area	Area (km ²)	Percent of total area

2.2.2: Agro-Ecological Zones

There are five main agro-ecological zones defined on the basis of climate, reflected by the natural vegetation and influenced by the soils. These are Rain Forest, Deciduous Forest, Transitional Zone, Coastal Savannah and Northern Savannah (Guinea and Sudan Savannah). See appendix for map.

Table 2.5: Rainfall Distribution by Agro-Ecological Zones

Agro-ecological Zone	Mean annual Rain (mm)	Growing Period (Days)	
		Major season	Minor season
Rain Forest	2,200	150 - 160	100
Deciduous Forest	1,500	150 - 160	90
Transitional	1,300	200 - 220	60
Coastal Savannah	800	100 - 110	50
Northern Savannah:			
Guinea Savannah	1,100	180 - 200	*
Sudan Savannah	1,000	150 - 160	*

Source: Ghana Meteorological Agency (GMet), Accra.

*Rainfall distribution is bimodal in the Forest, Transitional and Coastal Zones, giving a major and minor growing season; elsewhere (Guinea Savannah and Sudan Savannah), the unimodal distribution gives a single growing season.

Table 2.6: Land Area of Vegetation by Zones

Vegetation Zone	Area ('000sq. km.)	% of Total
Guinea Savanna Woodland	147.90	62.00
Deciduous Forest		
- Celtis -Triplochiton Association	37.30	15.60
- Antiaris Chlorophora Association	27.00	11.30
Rain/Deciduous Forest Eco-zone	8.40	3.50
Rain Forest	7.50	3.20
Thicket and Grassland	4.50	1.90
Sudan Savanna Woodland	1.90	0.80
Swamp and Lagoonal Vegetation	1.30	0.60
Others	2.70	1.10
Total	238.50	100.00

Source: Ministry of Lands and Forestry, Accra

2.3: Soils

The soils have predominantly light textured surface horizons in which sandy loams and loams are common. Lower soil horizons have slightly heavier textures varying from coarse sandy loams to clays. Heavier textured soils occur in many valley bottoms and in parts of the Accra Plains. Many soils contain abundant coarse material either gravel and stone, or concretionary materials which affect their physical properties.

Table 2.7: Fertility Status of Soils in the Regions of Ghana

Region	Soil pH	%Organic matter	%Total Nitrogen	Available Phosphorus (mg/kg soil)	CEC
Ashanti Region	4.1-7.3	0.00-13.83	0.00-0.52	0.00-6.98	0.00-9.62

2.4: Farming Systems

Agriculture is predominantly on a smallholder basis in Ghana. Majority of farm holdings are less than 2 hectares in size, although there are some large farms and plantations, particularly for rubber, oil palm and coconut and to a lesser extent, rice, maize and pineapples. The main system of farming is traditional which involves the hoe and cutlass as tools mostly used. There is little mechanized farming, but bullock farming is practiced in some places, especially in the North. Agricultural production varies with the amount and distribution of rainfall. Soil factors such as texture, nutrient levels, ph, etc. also play an important role in the Agricultural production. Most food crop farms are intercropped. Monoculture is mostly associated with large-scale or commercial farms.

2.5: Climate

The climate of Ghana is tropical. The eastern coastal belt is warm and comparatively dry. The south west corner is hot and humid, and the north is hot and dry. Annual average temperatures range from 26.1 degrees Celsius in places near the coast to 28.9 degrees Celsius in the extreme north. It is usually breezy and sunny. Day time temperatures may rise above 40°C in the north. There are two rainy seasons in the south from March to July and from September to October (bimodal rainfall system). The northern part of the country, on the other hand, has only one rainy season, from July to September (mono-modal rainfall system). These thus define the farming seasons of Ghana (Major and Minor seasons).

Ghana	51.5		41.2

GSS: GLSS 6, 2014

*The base for this indicator is household members engaged in agricultural activities

3.3: Distribution of Labour Force by Economic Activity

Figure 4 presents the share (%) of total labour force (no. of persons in employment) for persons aged 15 years and older, by economic activity (sector). The Ghanaian Economy is broadly categorised into three sectors, namely; Agriculture (including Forestry and Fishing), Industry and Service. As indicated, Agriculture's contribution to total employment is estimated to be 44.7 per cent, with the Service and Industry sectors accounting for 40.9 per cent and 14.4 per cent respectively (GLSS6, 2014). This means, Agriculture has regained its position as the largest employer, after dropping second to the Service's Sector, as reported in the 2010 population census. Refer to Appendix 19 for further details.

Figure 4: Share of Total Labour Force by Sector (persons aged 15 years and older)

Source: GSS, Ghana Living Standard Survey, Sixth round (GLSS6), with Labour Force Module, August, 2014

SECTION 4: AGRICULTURAL OUTPUT

4.1: Crop Sub-Sector

4.1.1: Principal Agricultural Produce

- **Industrial Crops:** Cocoa, Oil Palm, Coconut, Coffee, Cotton, Kola, Rubber, Cashew, Shea, Soya bean.
- **Starchy staples, Cereals and Legumes:** Cassava, Cocoyam, Yam, Plantain, Maize, Rice, Millet, Sorghum, Cowpea and Groundnut.
- **Fruits and Vegetables:** Pineapple, Citrus, Banana, Pawpaw, Mango, Tomato, Pepper, Okro, Egg Plant, Onion, Butternut squash, Asian Vegetables.

Note: *Milled rice from 2007 to 2011 used extraction rate of 60%; from 2012-2016 extraction rate of 69% of paddy was used (based on revised industry records). The total annual production for all major crops does not include milled rice.

4.1.2 Leading Producers of Some Selected Crops Grown in Ghana

Figures 5a to 5c present the five leading (top) regions, based on a 3-year average production (2014-2016), for some selected crops grown in Ghana. Categories of crops considered are; cereals (Maize, Rice, Sorghum), roots and tubers (Cassava and Yam) and legumes (Cowpea).

Further details are presented in appendix 26.

Average of 1996 – 1997 used as base year for 2007 – 2013

*Average of 2006-2010 used as base year (2006-2010=100)

Figure 5d: Production Indices of Starchy Staples

Source: Based on Table 4.5. Year 2007 to 2013 were calculated using average of 1996-97 as base year, Year 2014 to 2016 were calculated using average of 2006 to 2010 as base year.

Figure 5e: Production Indices of Major Cereals

Source: Based on Table 4.5. Year 2007 to 2013 were calculated using average of 1996-97 as base year, Year 2014 to 2016 were calculated using average of 2006 to 2010 as base year.

Figure 5f: Production Indices of Major Legumes

Year 2007 to 2013 were calculated using average of 1996-97 as base year, Year 2014 to 2016 were calculated using average of 2006 to 2010 as base year.

Table 4.6: Mean Annual Production Growth Rates of Selected Crops

CROP	Average Production ('000 Mt)		Growth Rate (%)	Average Production ('000 Mt)		Growth Rate (%)
	2005-2007	2008-2010		2011-2013	2014-2016	
Maize	1,193.27	1,653.80	11.37	1,799.47	1,727.48	-1.34
Rice (Paddy)	223.93	394.97	20.59	504.87	644.23	8.38
Millet	144.20	219.43	14.86	172.93	157.11	-3.12
Sorghum	256.27	344.87	10.30	274.60	250.54	-2.98
Cassava	9,807.70	12,361.93	7.94	14,926.03	17,178.30	4.75
Cocoyam	1,678.63	1,515.70	-3.31	1,277.13	3,346.73	37.43
Yam	4,195.60	5,511.10	9.42	6,522.87	5,252.87	-6.90
Plantain	2,975.10	3,479.30	5.30	3,617.20	3,924.75	2.73
Groundnuts	413.93	495.37	6.11	449.67	423.04	-1.99

CROP	Average Production ('000 Mt)		Growth Rate (%)	Average Production ('000 Mt)		Growth Rate (%)
	2005-2007	2008-2010		2011-2013	2014-2016	
Oil Palm	1,711.67	2,001.57	5.30	2,160.85	-	-
Cowpea	143.23	201.33	11.89	220.10	203.51	-2.55
Soyabean	47.63	110.83	32.14	151.63	142.23	-2.09

Source: Based on table 4.4 and Appendix 1. 5. Growth Rate is based on the comparison of the average of 2005 – 2007 with the average of 2008 – 2010 and the average of 2011 - 2013 with average of 2014 – 2016.

Table 4.7: Average Yield of Selected Crops under Rain-fed Conditions

Crop	Average Yield (On Farm) (Mt/Ha) 2016	Potential Yield (Mt/Ha)*	% Achieved
Cassava	20.25	45	45.00
Plantain	11.17	38	29.39
Yam	17.42	52	33.50
Cocoyam	6.53	20	32.65
Maize	1.99	5.5	36.18
Rice (Paddy)	2.92	6	48.67
Cowpea	1.41	2.5	56.40
Soya bean	1.65	3	55.00
Groundnut	1.3	3.5	37.14
Millet	1.16	2	58.00
Sorghum	1.14	2	57.00
Sweet Potato	15	56	26.79
Taro	7	20	35.00
Cocoa	0.5	1	50.00
Coffee	1.6	-	-
Cashew	0.5	1.8	27.78
Orange	40	100	40.00
Pawpaw	34.5	75	46.00
Mango	-	13	-
Pineapple	61.8	72	85.83
Cotton	0.8	-	-
Rubber	0.8	-	-
Tobacco	1.6	-	-
Tomato	10	20	50.00
Garden eggs	7.9	15	52.67
Pepper	15	30	50.00

*Note: Potential yields refer to yields that have been achieved in cases where more effective extension and use of recommended technologies have occurred. The dashes indicate crops for which no on-farm research findings were available as far as potential yields were concerned. Data on potential yields have been revised in line with new findings by the C RI, Kumasi

4.1.3 Crop Yield Performances by District

The following tables (Tables 4.7.1 to 4.7.3) show yield performances by the top-ten performing districts for some selected crops grown in Ghana. The category of crops assessed include; the cereals, roots and tubers (including plantain) and legumes. The top performers were determined using a three-year average yield. As indicated, the tables compare average yield (2013-2015) by district, with both the national average and potential (achievable) yields for each crop.

Table 4.7.1: Cereals

Tables 4.7.1a to 4.7.1d present average yield performances by district for maize, rice, millet and sorghum.

Table 4.7.1a Average Yield Performance for Maize by District (Top 10 Districts)

MAIZE (Mt/Ha)							National Average	1.99
							Potential Yield	5.50
Region	District	2014	2015	2016	3-yr Avg.	Rank	Avg. Yield as % of National Avg.	Avg. Yield as % of Potential Yields
Eastern	West Akim	3.45	3.96	3.97	3.80	1	190.95	69.09
Upper west	Sissala East	2.96	3.21	3.46	3.21	2	161.31	58.36

Source: SRID

Notes. Estimated population for 2016 is based on 2010 population census figure = 28,308,301; 70% of domestic production for maize and cassava; 87% for rice, millet and sorghum; 80% for yam; 95% for cocoyam; 90% for groundnuts; 85% for plantain and cowpea. Livestock feed, wastage and seed account for the discount. *This is based on Per Capita Apparent Consumption ((Domestic Production available for consumption + Import – Export)/ Population).

Source: Bank of Ghana, In addition to the above indicated banks, there are some 139 Rural and Community Banks operating in the rural and peri-urban settings engaged in deposit mobilization and loan/advances delivery. Again there are 58 Non-Bank Financial Institutions in Ghana. These are helping in various areas in the agricultural sector. For example, of the latter is the Export Finance Company Limited providing the following services:

1. Pre and Post-shipment Credit Schemes; 2. Export Refinance Schemes; 3. Export Credit Guarantee Scheme; 4. Export Insurance Schemes and advisory services

5.3: Staffing Levels of MoFA

Table 5.5. shows the staffing levels of the Ministry of Food and Agriculture, by category, for the past ten-years - 2007 to 2016. As indicated, the staff levels declined sharply from 2014 onwards and this was on account of the implementation of the legislative instrument 1961 which requires that Regional and District Development Units (of MoFA) be ceded off to the Local Government Service. The impact of this is a significant downsize of the Ministry, as over 76 percent of MoFA staff have now been moved to the Local Government Service.

Table 5.5: Staffing Levels of MoFA by Profession and Category

Category of Staff	2007	2008	2009	2010	2011	2012	2013	2014	2015	2016

APPENDICES

Appendix 1: Average Rural Wholesale Price for Cassava

2004-2012 were calculated using 2002 as base year, Year 2013 was calculated using 2012 as base year.

Appendix 2: Average Rural Wholesale Price for Yam

Year 2004-2012 were calculated using 2002 as base year, Year 2013 was calculated using 2012 as base year.

Appendix 3: Average Rural Wholesale Price for Plantain

Year 2004-2012 were calculated using 2002 as base year, Year 2013 was calculated using 2012 as base year.

Appendix 4: Average Rural Wholesale Price for Cocoyam

Year 2004-2012 were calculated using 2002 as base year, Year 2013 -2015 calculated using 2012 as base year.

Appendix 5: Average Rural Wholesale Price for Maize

Year 2004-2012 were calculated using 2002 as base year, Year 2013 was calculated using 2012 as base year.

Appendix 6: Average Rural Wholesale Price for Sorghum

Year 2004-2012 were calculated using 2002 as base year, Year 2013 was calculated using 2012 as base year.

Appendix 7: Average Rural Wholesale Price for Millet

Year 2004-2012 were calculated using 2002 as base year, Year 2013 was calculated using 2012 as base year.

Appendix 8: Average Rural Wholesale Price for Groundnut

Year 2004-2012 were calculated using 2002 as base year, Year 2013 was calculated using 2012 as base year.

Appendix 9: Average Rural Wholesale Price for Rice (Local)

Year 2004-2012 were calculated using 2002 as base year, Year 2013 was calculated using 2012 as base year.

Appendix 10: Average Rural Wholesale Price for Tomatoes

Year 2004-2012 were calculated using 2002 as base year, Year 2013 was calculated using 2012 as base year.

LEGEND

- S1** Highly suitable areas for extensive mechanized cultivation of export and food crops, (cashew nut, sunflower, pineapples, maize corn, guinea corn, soybean, cassava, yam, cocoyam, plantain, beans etc.).
- S1a** Highly suitable soils, non-gravelly medium to moderately heavy textured. Suitable for cocoa, coffee, black pepper, sweet berry, ginger, citrus, cocoyam, banana, rice, sugarcane and vegetables.
- S1b** Have same characteristics as S1a above, but are situated in Savanna-transition vegetation zone. These areas are suitable for soybean, maize, yams, guinea corn, millet and groundnuts.

S2 Suitable areas for extensive mechanical cultivation of export and food crops.

S2a Crop suitability same as S1. Limitation to crop production may be due to gravelly subsoil horizons.

S2b Crop suitability same as S2a above. Limitation to crop production may be due to either light or heavy textured soils.

S3 Fairly suitable areas for the cultivation of crops such as maize, cassava, vegetables etc.

S3a May consist of heavy plastic clays mostly imperfectly to poorly drained soils good for mechanized irrigation of rice, sugarcane, vegetables, maize and millet.

S3b Mostly alluvial soils suitable for maize, guinea corn and vegetables.

S3c Includes gravelly and moderately shallow soils. Could be hand cultivated for cassava, vegetables and maize.

S4 Fairly to marginally suitable areas for the cultivation of crops.

S4a Consist of gravelly, moderately shallow to shallow, imperfectly drained soils. Limited to hand cultivation of cassava, citrus, palm oil and mangoes. Soils may occur on upland or undulating of very steep slopes. Problem of soil erosion is predominant.

S4b Soil may be imperfectly drained sands to loamy sands developed over beach sand or may have clay pan beneath the topsoil. Sandy areas may be used for groundnut and tiger nut cultivation.

S4d Soils are mainly loose sands developed on coastal sand dunes. Suitable for coconut cultivation. May be mixed with organic manure for vegetable cultivation as in Anloga areas.

N1 Unsuitable areas for upland arable and tree crops.

N1a Predominantly poor to very poorly drained soils, which may be developed for rice, sugarcane and vegetables.

N1b Terrace derived alluvial soils, which are dominated by rounded pebbles rendering them unsuitable for mechanized agriculture. May be suitable for maize, cassava, and pepper cultivation.

N1c Terrace derived soils, which contain surface pebbles and an undurated subsoil horizon. Soils may be left to prevailing grass vegetation for rough grazing of livestock.

N1d Soils dominated by ground water laterites rendering them imperfectly to poorly drain. May be developed for paddy rice cultivation or vegetation should be left for rough grazing by livestock.

N2 Very unsuitable areas for crop production. Soils are very shallow, gravelly, occurring on steep to very slopes. Should be reserved for forestry, wildlife and watershed protection.

D Very unsuitable areas for crop production. Soils are very saline and may be utilized for mining of edible salt.

Appendix 23: Yield Performance Summary (Maize)

NAV = National Average

ACH_Y = Achievable (potential) Yields

	Number	Share (%)
Total Number of Districts	172	100
Districts with yields above national average	52	30
Districts with yields equal to national average	2	1
Districts with yields below national average	118	69

Notes

From the table above, the average yields of maize (3-yr avg.) for 30 percent of districts in Ghana are above national average. The district with the highest yield performance is West Akim, in the Eastern Region, accounting for 190.73 percent of national average and 69.01 percent of potential yields.

69 per cent of districts, on the other hand, have yields which are below national average.

Dangme East in the Greater Accra Region recorded the lowest average yield performance accounting for 20.06 percent of national average and 7.26 percent of potential yields.

Maize yields for 1 percent of districts equalled national average.

Appendix 24: Comparison of District Average Yield (3-Yr.) Levels of Rice with National Average and Achievable (Potential) Yields

Appendix 25: Yield Performance Summary (Rice)

NAV = National Average

ACH_Y = Achievable (potential) Yields

	Number	Share (%)
Total Number of Districts	131	100
Districts with yields above national average	42	32
Districts with yields below national average	89	68

Notes

From the table above (Appendix 24), the average yield of rice (3-yr avg.) for 32 percent of districts in Ghana is above national average. Dangme West, in the Greater Accra Region, recorded the highest average yield performance (6.9%) accounting for 236.26 percent of national average and 114.98 percent of potential yields.

68 per cent of districts, on the other hand, reported yields below national average. The district with the lowest yield performance (0.87%) for the period was Nadowli in the Upper west Region, accounting for only 29.90 percent of national average and 14.55 percent of potential yields.

Appendix 26: Basic production Statistics for the Top 5 Producers of some Selected Crops

A: Maize Production (Mt) Statistics

Top 5 Regions	3-Yr Average	Share of Sub-Tot	Share of Overall Tot
BRONG AHAFO	418,492.67	30.34%	24.23%
EASTERN	403,068.72	29.22%	23.33%
ASHANTI	208,074.33	15.08%	12.05%
CENTRAL	176,127.28	12.77%	10.20%
NORTHERN	173,651.78	12.59%	10.05%
Sub Total	1,379,414.78		79.86%
TOTAL AVG PROD (ALL REGIONS)	1,727,376.98		

NOTES ON MAIZE

The table above shows that, the top 5 maize producing regions account for 79.86 percent of total maize produced in Ghana. Brong Ahafo region remains the largest maize producing region, accounting for 24.23 percent of overall total (national average) and 30.34 percent of total production for the top 5 regions. Eastern region follows closely with a share of 23.33 percent of national average.

B: Rice Production (Mt) Statistics

Top 5 Regions	3-Yr Average	Share of Sub-Tot	Share of Overall Tot
VOLTA	206,908.45	36.26%	32.11%
NORTHERN	177,464.50	31.10%	27.54%
UPPER EAST	118,250.26	20.73%	18.35%
EASTERN	34,270.08	6.01%	5.32%
ASHANTI	33,671.33	5.90%	5.23%
Sub Total	570,564.62		88.54%
TOTAL AVG PROD (ALL REGIONS)	644,404.10		

NOTES ON RICE

The Volta Region has again edged out the Northern Region to become the leading rice (paddy) producer in Ghana based on 3-yr average, accounting for about 32 percent of total production in the country. Among the top 5 rice producing regions however, its share is slightly higher – a little over 36 percent (36.26%). The Northern Region with a current share of 27.54 percent of overall total maintains the second position as far as the average weight (volume) of rice produced, for the past three years, is concerned (Table B).

C: Sorghum Production (Mt) Statistics

Top 5 Regions	3-Yr Average	Share of Sub-Tot	Share of Overall Tot
NORTHERN	92,517.59	38.71%	38.71%
UPPER WEST	88,770.94	37.14%	37.14%
UPPER EAST	51,507.24	21.55%	21.55%
VOLTA	5,441.10	2.28%	2.28%
BRONG AHAFO	764.85	0.32%	0.32%
Sub Total	239,001.71		100.00%
TOTAL AVG PROD (ALL REGIONS)	239,001.71		

NOTES ON SORGHUM

Sorghum production is mostly concentrated in the Northern part of Ghana (three Northern regions) and some parts of Brong Ahafo (mainly the transitional zone) and the Volta Region. The three northern regions together account for over 97 percent of total production with the Northern region contributing the largest production of over 38 percent (Table C).

D: Cassava Production (Mt) Statistics

Top 5 Regions	3-Yr Average	Share of Sub-Tot	Share of Overall Tot
EASTERN	4,649,507.68	31.69%	27.07%
BRONG AHAFO	3,844,252.67	26.20%	22.38%
ASHANTI	2,748,330.96	18.73%	16.00%
CENTRAL	2,001,225.04	13.64%	11.65%
NORTHERN	1,428,427.53	9.74%	8.32%
Sub Total	14,671,743.87		85.41%
TOTAL AVG PROD (ALL REGIONS)	17,178,211.78		

NOTES ON CASSAVA

Based on a 3-year average production, Eastern Region still remains the leading producer of cassava in Ghana with a share of 27.07 percent of overall (national) total. Brong Ahafo Region follows closely with a share of 22.38 percent. The 5 top producing regions together, account for 85.41 percent of total cassava production in the country. (Table D)

E: Yam Production (Mt) Statistics

Top 5 Regions	3-Yr Average	Share of Sub-Tot	Share of Overall Tot
BRONG AHAFO	2,445,357.30	36.73%	33.57%
NORTHERN	2,222,209.50	33.37%	30.50%
EASTERN	849,960.11	12.76%	11.67%

TOTAL AVG PROD (ALL REGIONS)	7,285,122.15		

NOTES ON YAM

The top 5 yam producing regions in Ghana together share between them over 90 percent of national total. The leading producer, Brong Ahafo Region, accounts for 33.57 percent of the entire production. Against the top 5 average, however, the region (Brong Ahafo) share is 36.73 percent. The Northern Region follows, in second place, with a share of about 31 percent of overall total (See Table E for further details).

F: Cowpea Production (Mt) Statistics

Top 5 Regions	3-Yr Average	Share of Sub-Tot	Share of Overall Tot
NORTHERN	94,925.41	48.09%	46.62%
UPPER WEST	77,367.49	39.20%	38.00%
UPPER EAST	12,358.93	6.26%	6.07%
BRONG AHAFO	7,593.67	3.85%	3.73%
ASHANTI	5,142.65	2.61%	2.53%
Sub Total	197,388.15		96.94%
TOTAL AVG PROD (ALL REGIONS)	203,613.65		

NOTES ON COWPEA

The 3 Northern Regions dominate in cowpea production, with a share of about 91 percent of total volume of production in Ghana. The Northern Region alone contributes about 47 percent of total production in the country, followed by Upper West Region, with a 38 percent share of national total. Of the top 5, regions, Ashanti is the least producer accounting for just over 2 percent (2.53%) of national total. The top 5 regions together contribute about 97 percent of overall cowpea production in Ghana (Table F).
